ECN - ENGINEERING CHANGE NOTICE

Subject:

During May and after we will upgrade our existing VGA controller board to also support **Digital Video Interface (DVI)** connection. A single input female **DVI-D** 24p connector.

The **DVI** interface will give you the possibility to use digital RGB signal transfers instead of analog transfers, if your PC or compatible system supports it. This will give you sharper images, and accurate color representation, and a third input in addition to the already existing analog RGB Input and Video Input on our standard **MMD** models. All functions remains the same as previous models, and the new **DVI** interface is backwards compatible with your existing system, and there will be no change in part numbers.

NOTE: All new factory produced models will have this new controller installed.

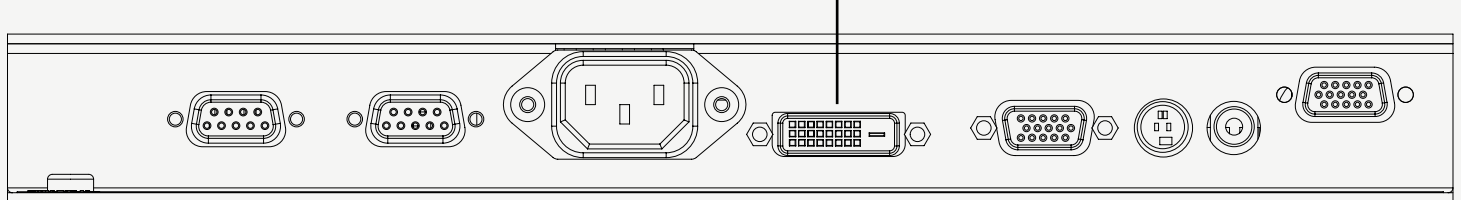

Maritime Multi Display (MMD) models which are subject for engineering change:

JH 10T06 MMD	JH 18T04 MMD	JH 20T04 MMD
JH 15T03 MMD	JH 19T01 MMD	JH 23T02 MMD
JH 17T01 MMD	JH 20T03 MMD	

(Also includes variations and custom made models which is based on the standard **MMD** model)
